

Community Resource Planning (CRP)

Our community resource planning software provides state agencies with a **single, integrated platform** to overcome silo'd communication and collaboration challenges and build a **more resilient, equitable, and responsive state**. It is a system built by and for government, designed to replace inefficiency with collaboration and **fragmented data with real-time insight**.

The software enables agencies to:

Gain a single source of truth:

Centralize data from diverse agencies—including health, public works, and finance—onto a unified platform to eliminate information silos and enable true cross-departmental collaboration.

Make data-driven decisions:

Use powerful analytics, dashboards, and mapping tools to visualize community needs and track resource allocation against strategic goals. This empowers leaders to make smarter, more informed decisions backed by real-time data, not guesswork.

Engage and build public trust:

Increase transparency by using public-facing dashboards and reporting tools to communicate progress on key initiatives. By making data accessible and understandable, agencies can build confidence and show the tangible impact of public funds.

Automate workflows and reduce administrative burden:

Automate routine tasks, from compliance reporting to stakeholder notifications, freeing up staff to focus on high-impact work and strategic analysis.

Unified Data · Stronger Decisions · Better Outcomes

From disconnected systems to one connected community; CRP unites people, data, and purpose to build a smarter, more responsive state.
